EXAMINER

GARRETT, DAWN L

ART UNIT

PAPER NUMBER

1794

MAIL DATE

DELIVERY MODE

01/22/2008

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

| | | | |
|------------------------------|--------------------------------------|--------------------------------------|--|
| Office Action Summary | Application No. 10/804,788 | Applicant(s) SUZURI ET AL. | |
| | Examiner Dawn Garrett | Art Unit 1794 | |

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 01 November 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-17, 19, 20 and 22-58 is/are pending in the application.
- 4a) Of the above claim(s) 14-17, 20, 22-26, 28, 30-34 and 48-51 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-13, 19, 27, 29, 35-47 and 52-58 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 19 March 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Amendment

1. This Office action is responsive to the amendment filed November 1, 2007. Claims 18 and 21 are canceled. Claims 20, 22, 23, 24, 25, and 26 were amended. Claims 14-17, 20, 22-26, 28, 30-34, and 48-51 are withdrawn as non-elected.

2. The species under consideration remains as the following:

Formula 11 as the host compound wherein R₁₀₀₃ is substituted with a heterocyclic group and R₁₀₁₁ is substituted with an aromatic group. The remainder of the R groups represent hydrogen atoms.

The Formula 4-2 compound wherein the at least one substituent group is an alkyl group.

3. The rejection of claims 1-6, 8-13, 19, 27, 29, 35-40, 42-47, 52-55, 57 and 58 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mishima (US 200/0053462 A1) in view of Thoms et al. (US 2003/0205696 A1) and Suzuri et al. (EP 1371709 A1) set forth in the last Office action is withdrawn due to the perfection of the foreign priority date of the application by providing a certified translation of the document.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claim 19 is again rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 19 depends upon claim 1. Claim 19 appears to define a triarylamine compound that is broader than Formulas 4-1 or 4-2 set forth in claim 1 and accordingly, claim 19 is unclear with regard to whether it encompasses compounds other than 4-1 and 4-2 of the parent claim. Clarification and/or correction are required.

Applicant did not address this rejection in the response mailed November 1, 2007 and accordingly the rejection is maintained.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 1-6, 8-13, 19, 27, 29, 35-40, 42-47, 52-55, 57 and 58 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mishima (US 2001/0053462 A1) in view of Thoms et al. (US 2003/0205696 A1) and Ueda et al. (US 2002/0094452).

Mishima teaches an electroluminescent device comprising a light emitting layer with a carbazole host material and a phosphorescent emitter guest material

(see abstract and paragraph 36, sixth line, and par. 15-17). The devices disclosed by Mishima further comprise a hole injecting/transporting layer comprising aromatic tertiary amine derivatives (see par. 35, first line through twelfth line). Mishima fails to teach specifically the carbazole host species under consideration. Thoms et al. teaches in analogous art carbazole host materials for a light emitting layer of an organic electroluminescent device according to the species under consideration (see par. 19, page 2):

Mishima further fails to teach specifically the aromatic tertiary amine derivative currently under consideration. Ueda et al. teaches, in analogous art, electroluminescent elements comprising aromatic tertiary amine compounds according to the species under consideration (see general formula V on page 2 and pages 5-18 showing compounds). It would have been obvious to one of ordinary skill in the art to have selected the carbazole derivative according to Thoms et al. for the host compound and the aromatic tertiary amine compound taught by Ueda et al. for the tertiary aromatic amine compound, because Mishima generally teaches that such compounds are suitable for the Mishima device as host and hole injecting/transporting compounds respectively.

With regard to claims 6 and 40, Mishima teaches both a hole injecting and hole transporting layer (two layers) may be included in the device (see par. 21 and par. 35) per the requirement of a second hole transporting layer. Mishima teaches porphyrin-based compounds, aromatic tertiary amines, and styrylamines (see par. 35), which are all listed as preferred materials for the second “hole transporting layer” by applicant in the specification.

Since the references teach the same compounds as required by applicant in the claims, the property limitations of claims 1-5, 9-11, 36-39, and 43-45 are considered to be met by the references.

Claims 52 and 53 are product-by-process limitations. See M.P.E.P. § 2113:

“Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process.” *In re Thorpe*, 227 USPQ 964, 966 (Fed. Cir. 1985)...

“The Patent Office bears a lesser burden proof in making out a case of *prima facie* obviousness for product-by-process claims because of their peculiar nature” than when a product is claimed in the conventional fashion. *In re Fessman*, 180 USPQ 324, 326 (CCPA 1974).

Once the Examiner provides a rationale tending to show that the claimed product appears to be the same or similar to that of the prior art, although produced by a different process, the burden shifts to applicant to come forward with evidence establishing an unobvious difference between the claimed product and the prior art product. *In re Marosi*, 218 USPQ 289, 292 (Fed. Cir. 1983).

With regard to claim 55, Mishima discloses the light emitting device may be part of an illumination light source (see paragraph 1).

8. Claims 7 and 41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mishima (US 2001/0053462 A1) in view of Thoms et al. (US 2003/0205696 A1) and Ueda et al. (US 2002/0094452) and Oshiyama et al. (EP 1267428 A2). With regard to claims 7 and 41, Mishima fails to teach specifically the thickness of the hole transporting/injecting layer adjacent the light emitting layer. Oshiyama et al. teaches, in analogous art, hole transportation layers for an electroluminescent device ordinarily have a thickness of 5nm and above (see page 45, par. 63). It would have been obvious to one of ordinary skill in the art to have formed a hole transporting/injecting layer adjacent the light emitting at a thickness of 5-20nm, because Oshiyama et al. teaches such a thickness for a hole transporting layer is suitable and functional for an electroluminescent device. One would expect such a thickness for the hole transportation layer to be similarly useful in the Mishima device.

9. Claim 56 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mishima (US 2001/0053462 A1) in view of Thoms et al. (US 2003/0205696 A1) and Ueda et al. (US 2002/0094452) in further view of Ogo et al. (US 6,608,748). The rejection of claims 1 and 55 are relied upon as set forth above. While Mishima discloses the light emitting device may be part of an illumination light source (see paragraph 1), Mishima fails to mention specifically the illuminator may be used with a liquid crystal element. Ogo et al. teaches in analogous art the use of an electroluminescent illuminator with a liquid crystal element to form a

display (see Figures and col. 5, lines 40-49). It would have been obvious to one of ordinary skill in the art to have combined a liquid crystal element with the device taught by Mishima in view of Thoms and Ueda et al., because Ogo et al. teaches an electroluminescent illuminator may be used with a liquid crystal element to form a quality display device.

Response to Arguments

10. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dawn Garrett whose telephone number is (571) 272-1523. The examiner can normally be reached on Monday through Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Milton Cano can be reached on (571) 272-1398. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
